

Introduction

EnergyLogic Inc. is a leading provider of home energy efficiency services, consulting, training, and software services. Since its founding in 2006, EnergyLogic has completed more than 10,000 home energy audits, trained more than 400 energy raters and auditors across the United States and developed two software tools. EnergyLogic is quickly expanding to serve a dramatic increase in government programs aimed at improving energy efficiency in residential homes, commercial buildings and public institutions. EnergyLogic is based in Berthoud, Colorado, about 45 miles north of Denver.

Services

Energy Professionals

Training

EnergyLogic provides training, certification, oversight and software tools to home energy auditors, raters and their private and public sector employers. Certification training includes Residential Energy Service Network (RESNET) Home Energy Rater, Building Performance Institute (BPI) Building Analyst, and WaterSense Inspector. Other training is available for Energy Star New Homes, commercial audits and plan analysis for building professionals. Up to 500 students per year take classes in a specialized facility in Berthoud, Colorado that offers hands-on training opportunities with a variety of mechanical systems and weatherization techniques. EnergyLogic is planning to launch a full slate of on-line training opportunities in late 2010.

Business Software

EnergyLogic has developed two software packages to support home energy auditors and providers, particularly large government agencies. **iRate**® (www.myirate.com) is an award-winning enterprise management system for managing and operating all aspects of an energy auditing program. **OptiMiser**™ (www.optimiseraudits.com) makes home energy audits easier, more accurate and customizable. Launched in late 2010, OptiMiser™ was developed in partnership with OptiMiser, LLC. Both iRate® and OptiMiser™ are being used by municipalities, states and other entities to manage and perform effective energy auditing operations.

Homeowners

Home Energy Audits and Weatherization

Energy efficient homes are more comfortable, healthy and cost less to heat and cool. EnergyLogic provides comprehensive home inspections, testing and analysis to determine a home's energy

performance and what can be done to improve it. EnergyLogic is currently partnering with Veteran's Green Jobs, a Denver-based nonprofit organization, to provide weatherization services to 1,800 income-qualified households in Denver and Jefferson counties. The \$9 million program is funded by the American Reinvestment and Recovery Act and administered by the Colorado Governor's Energy Office. EnergyLogic is providing energy audits and weatherization services for residents in Fort Collins and for customers of several natural gas utility companies across Colorado.

Homebuilders

Home Energy Performance Testing, Training

EnergyLogic works with homebuilders and their on-site sales and construction teams to meet the comfort, efficiency and safety standards that today's consumers demand. In addition to providing an energy efficiency "score" to finished homes, EnergyLogic provides services throughout the construction process, including testing for air tightness, duct systems, and combustion appliance zones. The goal is to assess the performance of a house "as a system" including all of its components: building shell, heating and cooling systems and health and safety items.

Awards

U.S. Environmental Protection Agency:

- 2010 ENERGY STAR partner of the Year
